

Windows Server 2016

Networking with Windows Server 2016

Windows Server 2016

Código de curso: 20741

Pre-requisitos: inglés técnico y conocimientos básicos de servidores

Duración: 35 horas.

Objetivo: Este curso está diseñado principalmente para profesionales de TI que tienen cierta experiencia con Windows Server. También para profesionales que serán responsables de gestionar el almacenamiento y para el personal que necesita comprender los escenarios, los requisitos, y las opciones que son disponibles y aplicables a Windows Server 2016.

Administradores del servidor de Windows que son relativamente nuevos en la administración de Windows Server y otras tecnologías relacionadas, y que quieren aprender más sobre el almacenamiento y las características en Windows Server 2016.

Profesionales con conocimientos generales, que buscan conocer acerca de Windows Server, especialmente alrededor de tecnologías de almacenamiento y su administración en ambientes físicos/virtuales.

TEMARIO

Course Outline
Module 1: Planning and implementing an IPv4 network This module also explains how to use fundamental networking tools and techniques to configure and troubleshoot IPv4-based networks.

Lessons

- Planning IPv4 addressing
- Configuring an IPv4 host
- Managing and troubleshooting IPv4 network connectivity

Lab : Planning an IPv4 network

- Planning the IPv4 address assignments

Lab : Implementing and troubleshooting an IPv4 network

- Verifying IPv4
- Troubleshooting IPv4

After completing this module, students will be able to:

- Plan IPv4 addressing.
- Configure an IPv4 host.
- Manage and troubleshoot IPv4 network connectivity

Module 2: Implementing DHCP This module explains how to plan and implement DHCP to support the IPv4 infrastructure.

Lessons

- Overview of the DHCP server role
- Deploying DHCP

- Managing and troubleshooting DHCP

Lab : Implementing DHCP

- Planning a DHCP server implementation
- Implementing the DHCP configuration
- Validating the DHCP implementation

After completing this module, students will be able to:

- Explain the DHCP server role.
- Deploy DHCP.
- Manage and troubleshoot DHCP.

Module 3: Implementing IPv6 This module explains how to implement IPv6, and how to integrate IPv6 and IPv4 networks. **Lessons**

- Overview of IPv6 addressing
- Configuring an IPv6 host
- Implementing IPv6 and IPv4 coexistence
- Transitioning from IPv4 to IPv6

Lab : Configuring and evaluating IPv6 transition technologies

- Reviewing the default IPv6 configuration
- Implementing DHCPv6
- Configuring network integration by using ISATAP
- Configuring native IPv6 connectivity
- Configuring 6to4 connectivity

After completing this module, students will be able to:

- Describe the features and benefits of IPv6.
- Configure an IPv6 host.
- Implement the coexistence between IPv4 and IPv6 networks.
- Transition from an IPv4 network to an IPv6 network.

Module 4: Implementing DNS This module explains how to install, configure, and troubleshoot DNS within the organization's network. **Lessons**

- Implementing DNS servers
- Configuring zones in DNS
- Configuring name resolution between DNS zones
- Configuring DNS integration with Active Directory Domain Services (AD DS)
- Configuring advanced DNS settings

Lab : Planning and implementing name resolution by using DNS

- Planning DNS name resolution
- Implementing DNS servers and zones

Lab : Integrating DNS with Active Directory

- Integrating DNS with Active Directory

Lab : Configuring advanced DNS settings

- Configuring DNS policies
- Validating the DNS implementation
- Troubleshooting DNS

After completing this module, students will be able to:

- Implement DNS servers.
- Configure zones in DNS.
- Configure name resolution between DNS zones.
- Configure DNS integration with AD DS.
- Configure advanced DNS settings

Module 5: Implementing and managing IPAM This module explains how to implement and manage the IPAM feature in Windows Server 2016. This module also explains how to use IPAM to manage services such as DHCP and DNS. **Lessons**

- Overview of IPAM
- Deploying IPAM
- Managing IP address spaces by using IPAM

Lab : Implementing IPAM

- Installing the IPAM Server feature
- Provisioning the IPAM Server
- Managing IP address spaces by using IPAM

After completing this module, students will be able to:

- Describe the IPAM functionality and components.
- Deploy IPAM.
- Manage IP address spaces by using IPAM.

Module 6: Remote access in Windows Server 2016 This module explains how to plan for remote access in Windows Server 2016 and how to implement Web Application Proxy. **Lessons**

- Overview of remote access
- Implementing the Web Application Proxy

Lab : Implementing Web Application Proxy

- Implementing Web Application Proxy
- Validating the Web Application Proxy deployment

After completing this module, students will be able to:

- Describe remote access.
- Implement Web Application Proxy.

Module 7: Implementing DirectAccess This module explains how to implement and manage DirectAccess in Windows Server 2016. **Lessons**

- Overview of DirectAccess
- Implementing DirectAccess by using the Getting Started Wizard
- Implementing and managing an advanced DirectAccess infrastructure

Lab : Implementing DirectAccess by using the Getting Started Wizard

- Verifying readiness for a DirectAccess deployment
- Configuring DirectAccess
- Validating the DirectAccess deployment

Lab : Deploying an advanced DirectAccess solution

- Preparing the environment for DirectAccess
- Implementing the advanced DirectAccess infrastructure
- Validating the DirectAccess deployment

After completing this module, students will be able to:

- Explain DirectAccess and how it works.
- Implement DirectAccess by using the Getting Started Wizard.
- Implement and manage an advanced DirectAccess infrastructure.

Module 8: Implementing VPNs This module explains how to implement and manage remote access in Windows Server 2016 by using VPNs. **Lessons**

- Planning VPNs
- Implementing VPNs

Lab : Implementing VPN

- Implementing VPN
- Validating the VPN deployment
- Troubleshooting VPN access

After completing this module, students will be able to:

- Plan a VPN solution.
- Implement VPNs.

Module 9: Implementing networking for branch offices This module explains how to implement network services for branch offices. **Lessons**

- Networking features and considerations for branch offices
- Implementing Distributed File System (DFS) for branch offices
- Implementing BranchCache for branch offices

Lab : Implementing DFS for branch offices

- Implementing DFS
- Validating the deployment

Lab : Implementing BranchCache

- Implementing BranchCache
- Validating the deployment

After completing this module, students will be able to:

- Describe the networking features and considerations for branch offices.
- Implement DFS for branch offices.
- Implement BranchCache for branch offices.

Module 10: Configuring advanced networking features This module explains how to implement an advanced networking infrastructure. **Lessons**

- Overview of high performance networking features
- Configuring advanced Microsoft Hyper-V networking features

Lab : Configuring advanced Hyper-V networking features

- Creating and using Hyper-V virtual switches
- Configuring and using the advanced features of a virtual switch

After completing this module, students will be able to:

- Describe the high performance networking enhancements in Windows Server 2016.
- Configure the advanced Microsoft Hyper-V networking features.

Module 11: Implementing Software Defined Networking This module explains how to implement SDN. **Lessons**

- Overview of SDN.
- Implementing network virtualization
- Implementing Network Controller

Lab : Deploying Network Controller

- Preparing to deploy Network Controller
- Deploying Network Controller

After completing this module, students will be able to:

- Describe SDN.
- Implement network virtualization.
- Implement Network Controller.
